Green Technologies

COMPREHENSIVE EXPERTISE
FROM BIODIESEL TO
PLASTIC RECYCLING

Tailored strategies for securing patent protection

From renowned patent attorneys with many years of experience to young IP experts with doctorates: our team is diverse, agile, and competent. From start-ups to global corporations, we advise companies in all relevant technology areas on intellectual property. Demand-oriented and with great passion for a client's vision.

BRINGING KNOWLEDGE TOGETHER

The sharp dividing lines between individual technologies and sciences are becoming increasingly blurred. The law firm Wallinger Ricker Schlotter recognized this trend when it was founded and has since promoted interdisciplinary cooperation and professional exchange between patent attorneys from a wide range of disciplines.

PRACTICAL EXPERTISE

Our IP experts and patent attorneys have acquired their technical know-how through many years of experience in research – whether as successful scientists at universities or in the research and development departments of industry.

Green Technologies

Green Technologies are expected to do nothing less than solve the problems of our modern society in terms of sustainability and climate protection.

From groundbreaking developments in renewable energy to the use of genetically modified bacteria to produce biodiesel, the diversity of green technologies is unparalleled. In particular, collaboration between scientists and engineers from different disciplines is essential to the success of this exciting, fast-growing industry.

Our Expertise

Wallinger Ricker Schlotter has been advising clients in the field of green technologies for many years. Whether it is the latest lithium battery technologies, the production of biodiesel, state-of-the-art propulsion technologies or wind and solar power plants – our firm always has the right IP experts when it comes to patent protection of sustainable ideas, concepts, and innovative green technologies.

Concept

The interdisciplinary cooperation of patent attorneys is an elementary part of the firm's philosophy, from which clients in the interdisciplinary field of Green Technologies in particular benefit. Regardless of whether a start-up or a large corporation wants to protect green technologies – the team of attorneys is always optimally put together to master all technical and legal challenges.

Our Competencies

- MEDICAL TECHNOLOGY
- GREEN TECHNOLOGIES
- MATERIAL SCIENCES
